

URGENT ACTION

CLIMATE DISPLACED COMMUNITY NEEDS URGENT RELOCATION

Eighty-four people from the “El Bosque” community, in southern Mexico, were evacuated to Frontera village (12 km far from El Bosque) on November 1, 2023, due to sea level rise and the devastating effects of the climate crisis. Mexican authorities promised to relocate the community in April 2023 in the face of the terrible impacts of sea level rise that has threatened the community since 2019. Despite the continued destruction of homes and critical infrastructure, the relocation has not yet materialized. The Mexican State must guarantee the human rights of the people from El Bosque in face of the current humanitarian emergency, and immediately provide participatory and just relocation.

TAKE ACTION:

- Write a letter in your own words or using the sample below as a guide to one or both government officials listed. You can also email, fax, call or Tweet them.
- [Click here](#) to let us know the actions you took on **Urgent Action 108.23**. It's important to report because we share the total number with the officials we are trying to persuade and the people we are trying to help.

Mr. President López Obrador,

I'm deeply concerned about the dire situation faced by **84 residents of El Bosque, Tabasco**, due to rising sea levels intensified by the climate crisis. On November 1, they were evacuated due to a tidal wave caused by Cold Front 8 (Frente Frío 8). Currently, 69 people are in a temporary shelter in “Frontera” village (12 km far from El Bosque), and the rest have returned to the community or moved to other villages. This situation is significantly more distressing, given the promises made by your Government in April 2023 that they will be safely relocated urgently.

The community has reported significant losses and damage, including the destruction of homes, loss of infrastructure, and the alarming infiltration of sea water to the water wells.

We urgently request that your government expedite the relocation process of El Bosque, ensuring it is participatory and just, always guaranteeing the human rights of the affected people. We also urge your government to take measures to prevent, reduce, and mitigate the risks, losses, and damages caused by climate change, like robust mitigation and adaptation measures based on human rights.

Yours sincerely,

ADDITIONAL INFORMATION

El Bosque is a fishing community in the state of Tabasco, southern Mexico, affected by rising sea levels and coastal erosion intensified by the climate crisis. Since 2019, due to constant tidal waves and extreme weather events, the coastline of El Bosque has lost 200 meters (about 656.17 ft), resulting in the destruction of homes and community infrastructure. In April 2023, El Bosque community started negotiations with the Ministry of Agrarian, Territorial, and Urban Development of Mexico and the Mexican National Housing Commission to be relocated. However, this process has not progressed, leaving the community vulnerable to new extreme weather events, such as the torrential rains of Cold Front 8 on November 1.

Prior to November 1, the community had already lost more than 50 houses to rising sea levels, forcing people into temporary shelters in the community or to be displaced. Also, before November 1, the community reported that the water wells of El Bosque were already infiltrated by seawater, the healthcare services were neither constant nor adequate; electricity service was intermittent; and due to the destruction of their schools, children attended classes in an inadequate infrastructure. Under international human rights law, the Mexican State must adopt measures to protect, prevent, and reduce the risks, losses, and damages caused by the consequences of climate change. The development of robust mitigation and adaptation measures could reduce the number of people forced to move due to the consequences of climate change and prevent the aggravation of losses and damages generated by the climate emergency. Unfortunately, the Mexican government has chosen to continue increasing oil production, instead of generating solid commitments for a just energy transition to comply with the commitments made in the Paris Agreement. The situation in El Bosque, and in [Acapulco, Guerrero](#) (city that on 25 October suffered the impacts of Hurricane Otis, the strongest storm ever to hit Mexico's Pacific coast), show the failure of the Mexican government to protect marginalized groups that bear the brunt of the climate crisis.

The Mexican State **must** ensure that planned permanent relocations are a last resort, and in cases such as El Bosque in Tabasco, where such internal displacement is imminent, it must comply with the framework of international obligations on internal displacement, which establish that a durable solution for displaced persons be achieved. This durable solution must ensure that displaced persons can enjoy, without discrimination, all their human rights, including security; an adequate standard of living, including access to food, water, adequate housing, employment, and elementary education; access to work and means of subsistence; and access to effective mechanisms for the restitution of housing, land, and property of displaced persons, or to provide them with adequate compensation.

PREFERRED LANGUAGE TO ADDRESS TARGET: Spanish/or write in your own language.

PLEASE TAKE ACTION AS SOON AS POSSIBLE UNTIL: January 7, 2024

Please check with the Amnesty office in your country if you wish to send appeals after the deadline.

NAME AND PRONOUN: El Bosque Community (they/them)
